Human milk makes all the difference

The American Academy of Pediatrics’ (AAP) policy recommends the use of human milk for all preterm infants, whether mother’s own milk (MOM) or pasteurized donor human milk when mother’s own milk is unavailable.¹

Only Prolacta Bioscience, the leader in the science of human milk, provides:

• A full line of human milk-based nutrition for premature infants

• Human milk products that undergo the most rigorous testing and screening in the industry
A 100% human milk diet
for premature infants has resulted in improved outcomes and cost reduction due to the decrease in the incidence and severity of co-morbidities in premature infants.1, 2, 3, 4, 5, 6, 7

The choice is clear
Only mother’s own milk (MOM) and Prolacta’s full line of human milk-based products can provide the added calories, protein and nutrition premature babies need while maintaining an exclusive human milk diet.

Options for Maintaining an exclusive 100% human milk diet for ELBW and VLBW babies in the NICU
